Skills Required to Install

To install RADIUSdesk from source you need sufficient knowledge and experience on Linux to:

- Install the Linux operating system
- Edit text files from the terminal using a text editor like **Vi** or **Nano**.
- Install packages from a repository.
- Compile software through the **configure**, **make**, **make install** pattern.
- Be comfortable with the working of TCP/IP networking.

Install RADIUSdesk

RADIUSdesk is typically installed in one of two ways:

- **From source.** This can take up to two hours or more.
- **Download and import as a virtual machine.** You can have a working RADIUS server in less than 10 minutes!

> ### Download Virtual Machine now from Source Forge
>
> http://sourceforge.net/projects/radiusdesk/files/latest/download

Deploy the VM image

Run RADIUSdesk on Windows!

- RADIUSDesk VM on Windows using Virtualbox

Install from source on Ubuntu

Ubuntu still seems to be the most popular GNU/Linux distribution for beginners. We will follow the current trend.

1. Using Nginx
2. Install FreeRADIUS
3. Install node.js
4. Dynamic Login Pages (optional).
5. CoovaChilli (optional).

Updating an existing install

1. Update install on Ubuntu 16.04
2. Update VM 2017-0-1
