

## # Merits of Validation :-

:- Process parameters and controls are determined during the validation of any process or system.

:- It helps to determine the worst case + risks that may arise during the manufacturing of the quality products.

:- It helps to investigate the ~~the~~ deviations caused during the process.

+ Deep Study and understanding of the system and equipment are made possible due to the validation.

:- The risk of the regulatory non-compliance is minimized after the validation.

:- A validated process requires less process control + the finished product testing.

:- Reduces the product cost.

:- Decreases the chances of the failure of the batches.
