

e.g.

Household recycling product use
paper product: glass & aluminium.

5^o method to estimate the quantities of solid
waste management & -

→ follow log are these -

- a) load count analysis.
- b) weight volume analysis.
- c) material balance analysis

So there are number of procedure to
obtain samples from the municipal solid
waste.

Load Count Analysis Method

→ The Load Count Analysis Method -
In this method the quantity and composition of solid waste are determined by recording the estimated volume and general composition of each load of waste delivered to a landfill or transfer station during a specified period of time.
