In my opinion about the success of solid waste management program in our area \rightarrow the regarding of the disposal of solid waste has become one of the biggest challenges of public management in our India in the view the serious environmental impacts generated by the dumps final disposal of the waste outside specification and without sanitary control by the drain of regular landfill capacity.

there are various point in about my opinion which are following points

- 1.) Lack of awareness of waste generators
- 2.) Lack of initiative from municipal authorities
- 3.) Lack of manpower and technology
- 4.) Waste to energy technology have failed in many part of India to various reasons.
- 5.) Other technology like composting etc are good. However segregation of waste being a big challenge;
