

Ans-2 Problems facing with the non-conventional (Renewable) energy resources.

① The non-conventional sources of energy are very useful for the region like Orasaba block which is very much backward economically but nowadays people all over the world are slowly getting interest to use this energy.

The villagers in the study area deal with only four innovative items related to non-conventional sources of energy.

The economic problems also come on the way of these innovative items the inhabitants of study area mostly dependent on agriculture and most of the area is under single crop cultivation. Basically low rate of literacy has stopped them to think about the positive sides of utilization of non-conventional sources of energy.
