

Q. What are practical difficulties in Exploiting non-Conventional Energy sources?

Ans.

① Solar Energy - It is an a non-Conventional Energy of very cheap rate provide to easily. Because they have provide through the sunlight & it is no polluting energy & they are decrease Green house effects.

② Biomass . Green plants trap the energy they are convert into photosynthesis & convert into organic mass & they called Biomass. It is an easily transport one place to another place with the help of pipe line.

③ Hydro Energy . It is a renewable energy resource they are used producing power. Hydropower are through the water movement then produced a electricity & they are Renewable Energy source.
