

Q.7 write a detailed note on trunking. project what is design direct investment

Trunking is way to provide access to many clients by sharing a set of lines or frequencies instead of providing them individually. This is analogous to the structure of a tree with one trunk and many branches. Example of this include telephone systems and the two-way radios commonly used by police agencies. Trunking in the form of link aggregation and VLAN tagging, has been applied in computer networking as well.

A trunk is a single communications channel between two points, each point being either the switching center or the node

## Foreign Direct Investment (FDI)

A foreign direct investment (FDI) is the sum of investment in the ownership of a business in one country. It is thus distinguished from a foreign portfolio investment by control of direct

investment. The origin of the investment does not impact the definition, as an FDI. The investment may be made either "organically" by buying a company in the target country or "organically" by expanding the existing business in that country.
