

Q.7 write a detailed on Turkey project.
What is Foreign Direct Investment.

Turkey project:-

A Turkey project is a Turkey project. It is a type of project that is constructed so that it can be sold to any buyers as a completed product. This is contrasted with build to orders, where the constructor build an item to the buyer's exact specification, or when an incomplete product, is sold with the assumption that the buyer would complete it.

A Turkey Computer System is a complete computer including hardware, operating systems, and application, designed and sold to satisfy specific business

Requirements

The term Turkey is also often used in the technology industry most commonly to describe pre-built computer packages, in which everything needed to perform a certain type of task. This often includes a computer with pre-installed software various type of hardware and accessories

Such packages are commonly called appliances. A website with a ready-made solution and some configuration is called a turnkey website.

In drafting the term indicates an amount where a contractor must fully complete & well up to some milestone to receive any payments in exchange for goods & services upon completion.

Foreign Direct Investment

A foreign direct investment is an investment in the form of a controlling ownership in a business in one country by an entity based in another country. It is thus distinguished from a foreign portfolio investment by a notion of direct control. The origin of the investment does not impact the definition as an FDI: the investment may be made either irregularly by buying a company in the target country or organically by expanding the operation of an existing business in that country.
