

Information focuses on organizing, analysis, and retrieving data that deals with facts and figures.

It is relevant data that has a purpose but does not in and of itself convey knowledge.

Knowledge is more difficult to define. The main difference between knowledge cannot be truly be handled or "managed", because it resides in the minds of people who possess it.

Knowledge management creates ideal conditions for individuals to learn using another person's information and experience.

U
Embedded knowledge refers to the knowledge that is locked in process, product, culture, routines, artifacts, or structure.

It depends on the successful translation of someone's information and information of sometimes learned and experiential expertise into relevant information that is shared and used by others.
