

Requirement Modelling

(b) Explain the information requirement analysis:-

Requirement analysis is the process of defining the expectations of users for an application that is to be build or modified.

Requirement analysis involves all the stakes that are conducted to identify the needs of different Stakeholders. Therefore requirements analysis means to analysis document, validate and manage software or system requirement. High-quality requirement: High quality are documented, actionable, measurable, testable, traceable, help to identify business opportunities and are defined to a facilitate system design.
