

Q41

System developing life cycle and its concepts

Ans. Various Phases or stages or steps of SDLC are listed below:

1. Recognition of Need
2. Feasibility Study
3. Analysis
4. Design.
5. Implementation.
6. Post Implementation & Maintenance.

Each of the phase in SDLC is of great importance because each phase perform various activities in the development of a system.

Each phase takes some input, such as specification document from its previous phase and delivers an output, such as design document or some report.
