

Ques 2 Define Data, Information & Knowledge.

Ans. 1. Data :- Facts and figures which are raw ~~some~~ ^{some} things specific, but which are not organised in any way & which provide no further information regarding patterns context etc.

2. Information :- For data to become information, it must be contextualized, categorized in any way condensed. It may convey a trend in environment, or perhaps indicate a pattern of sales for a given period of time.

3. Knowledge :- Knowledge is closely linked to doing & implies know-how & understanding. The knowledge possessed by each individual is a product of his experience & encompasses the norms by which he evaluates new inputs from his surroundings.
