Ans 2

Differentiate Authentication and authorization.

Authentication	Authorization
① Process of confirming the truth of an attribute of a single piece of data claimed true by an entity.	① Process of specifying access rights/privileges to resources related to information security
② check a person details to identify him-	② check a users privileges to access resources
③ verifies users credential	③ validates users permission
④ occurs before authorization	④ occurs after authentication.

IP Security Architecture :-

→ IP Security is a capability which provide security mechanism

Date: / /

that includes secured data, group authentication and encryption mechanism within IP. It can be added to current version of the Internet protocol (IPv4 or IPv6) by means of additional header.
