Internet * protocol

→ It is a method or protocol by which data is sent from one computer to another on the Internet.

→ Each computer on the internet has at least one IP address that uniquely identifies it from all other computers on the internet.

→ When you send or receive data, the message is divided into little chunks called packets.

→ Each of these packets contains both the sender's address and the receiver's address.

→ Any packet is sent first to a gateway computer.
