

Architecture of the internet.

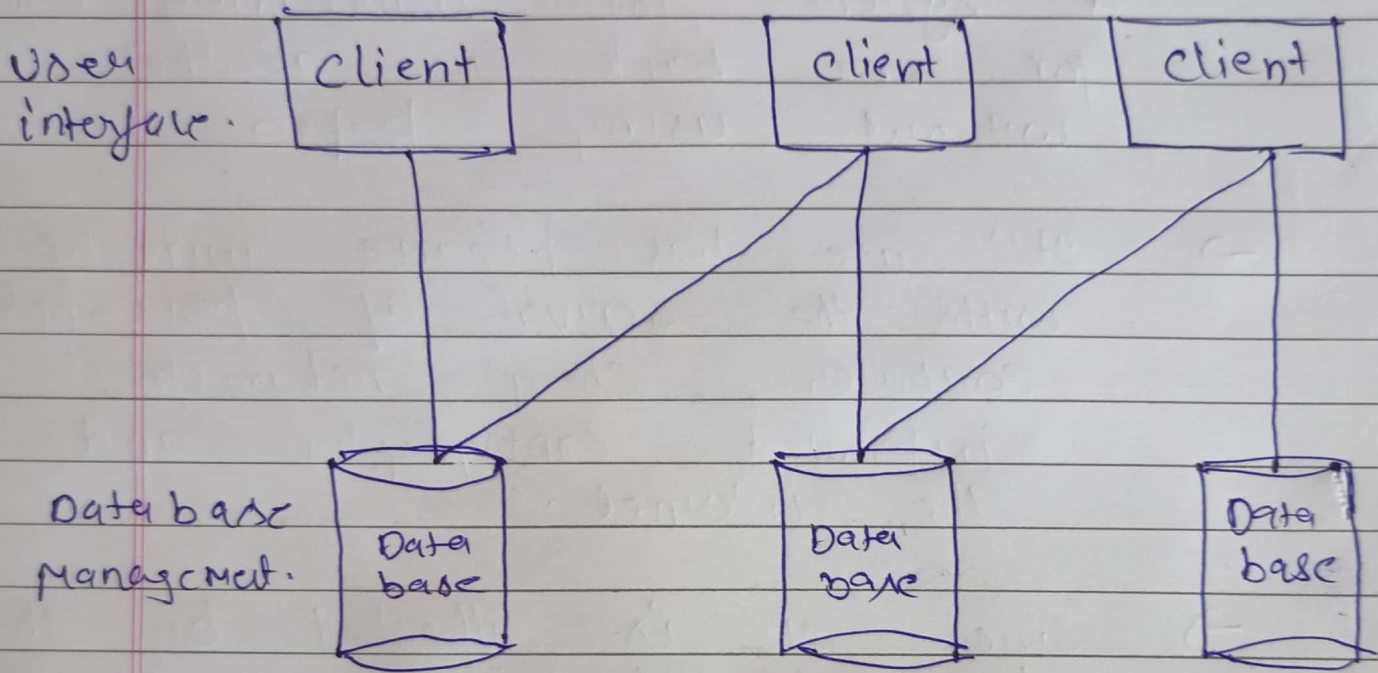

fig:-> Architecture of the internet in e-commerce

→ It is based on the client server architecture.

→ A client can be an application which use the GUI.

Difference b/w intranet and extranet

Intranet	Extranet
→ it's usage private	→ usage private
→ organization and internal department	→ check status of order, Access data & send Mail
→ High security, config. Under 100 security level in firewall	→ uses VPN technology for secure communication over internet.
→ owned by single organization	→ it is owned by single/multiple organization
