

Sec-4

1) Hook bolt:

A bolt hooked at one end and threaded at the other to receive a nut

(2) Tie bar: Tie bars are either deformed steel bars or connectors used to hold the faces of abutting slabs in contact. Tie bars are typically used at longitudinal joints or bⁿ and edge joint and a curb or shoulder.

3) Screw spike: A Rail Road spike with a screw thread on the upper part of shank so that the spike can be screwed home after being driven part way in.

4) Cotter:

A cotter is a pin or wedge passing through a hole of fix parts tightly together. As in a steam engine.
