

Client-server architecture: ~~is a~~
~~not computing model in~~
is a computing model in which
the server hosts, delivers and manages
most of the resources and services
to be consumed by the client. This
types of archite. has one or
more client computer connected
to a central server over a
network or internet connection.

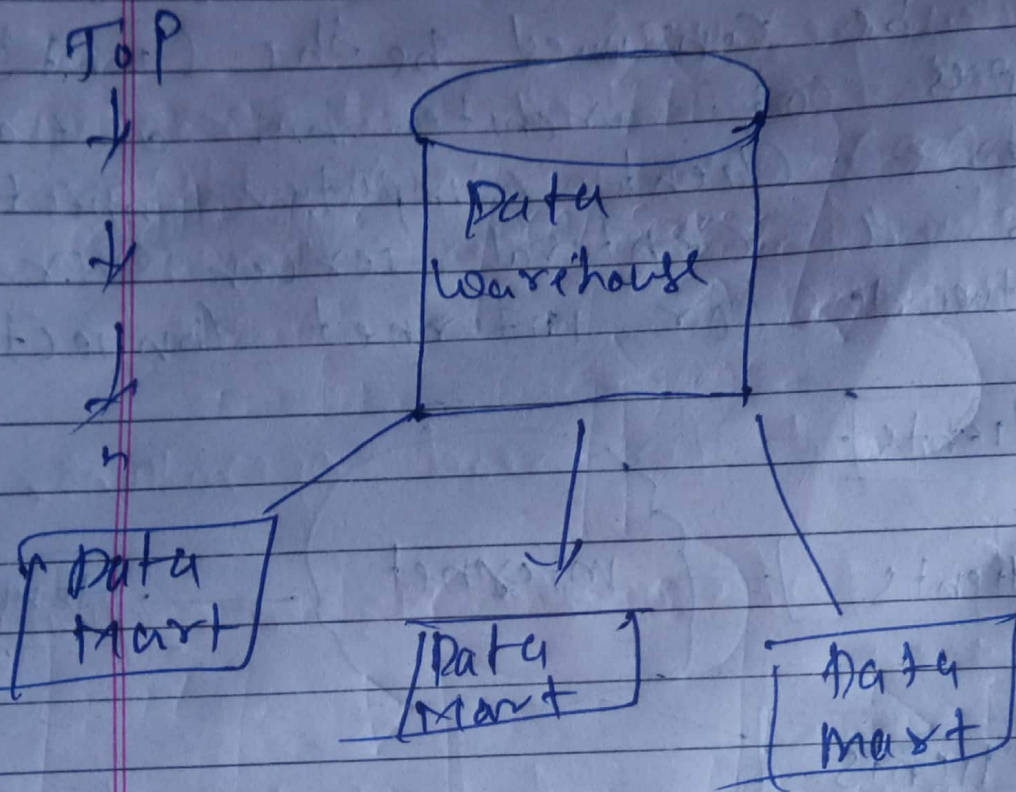

Data mart post its role in data
data warehouse house.

A data mart is focused on a single
functional area of an organization
and contain a subset of data stored
in a data warehouse.

A data mart is condensed version
of data warehouse and is
designed for use by a specific
department unit or set of users
in an organization.

Ex marketing, sales, HR, or finance etc, often controlled by a single department in an organization.

Role in data warehousing

Data mart helps to enhance user response time due to reduction in volume of data.

It provides easy access to frequently requirement data.

Data is partitioned and allow very of similar access control provided.
