

## Differentiate b<sup>h</sup> cyber security & computer security:-

S.no	cyber security	computer security
1.	It includes securing all the business related to machines. It also includes web security	It includes the security to computer parts like computer hardware & it also deals with the backup of the information stored in our computer
2.	It generally has more to do with the physical assets	It has more to do with software exploits.

## Internet security

- 1) The web runs using the communication infrastructure set by the internet.
2. The web is the collection of physical devices and communication protocols used to navigate & traverse to their websites.
- 3) Browsers can understand a lot of different protocols and have the capability to process many types of commands.

Internet security is a branch of computer security specifically related to not only internet often involving browser security and as it applies to ~~lats~~ web but also network security as it applies to other applications or operating systems as a whole.
