

# Information system resource

## Resources of Information system

An information system is generally integrated and coordinated a network of components which combine together to convert data information.

The information system provides access of information when it is required.

An information system is essentially made up of five components

- i Hardware
- ii Software
- iii Database
- iv Network
- v People

These five components integrate to perform input process, output feedback & control.

Hardware consists of input device, processor, operating system & media devices.
