# HTTP →

→ The Hyper Text Transfer Protocal (HTTP) is the most widely used appl. layer protocal.

→ Each time we open a web browser to surf the internet, we are using HTTP over TCP/IP.

→ A browser is an HTTP client because it sends requests to an HTTP server.

→ HTTP is used to transmit resources not just files.

802.5 LAN →

IEEE standard 802.5 LAN is a token ring system which is as shown in It consists of a number of stations connected to a ring Interfac Unit (RIU

Ring Interface Unit (RIU)
