

ETL process:

The functionality of sourcing, acquisition, cleanup and transformation tools also called as ETL tool include:

- (i) Removing unwanted data from names and definitions.
- (ii) Converting to common data name and definitions.
- (iii) Establishing defaults for missing data.
- (iv) ETL is a process for data warehousing and it stands for Extract, Transform and Load.

Three Tier Architecture for a Data warehouse System

Data Warehouse?

A data warehouse (DW) is a collection of corporate information and data derived from operational system and external data sources.
