

Information System -

It is classified by organisation levels & mode of data processing.

It has four types -

(i) Transaction processing system -

These process data resulting from the occurrence of transaction.

(ii) Management information system -

These are designed to take the relatively raw data available through TPS & convert in a report format.

(iii) Decision support system -

It comprises tools & techniques to help in gathering relevant information & analyze the options & alternatives.

(iv) Expert system -

It includes enterprises in order to aid managers in diagnosing problems or in problem solving.

Difference b/w Inf. system & Inf. assurance -

In information system, strategy is less focused, data is raw, business investment.

In "Informed" assurance strategy is focused well, data is processed, & privacy of business.
