

each in the former case, the P-chart will show two non-conformance items while the C-chart will show 10 faults.

2. Standardization is the process of creating standards to guide the creation of a good or service based on the consensus of all the relevant parties in the industry. The standards ensure that goods or services produced in a specific industry come with consistent quality and are equivalent to other comparable products in the same industry. Standardization also helps in ensuring the safety, interoperability and compatibility of goods produced.
