

2: The turret lathe is a form of metal working lathe that is used for repetitive production of duplicate parts, which by the nature of their cutting process are usually interchangeable.

A capstan machine is a processing machine used to make the same parts again and again. The cutting bits are mounted known as a capstan.

Side clearance means the shortest distance from centerline of track to a structure such as downspouts, ladders or other obstructions at the side of the track.

Angular clearance relieved space located below the straight of a die, to permit passage of blanks or slugs.
