

Ans 3 Objective of Research.

The purpose of research is to discover answers to questions through the application of scientific procedure. The main aim is to find out the truth which is hidden and which has not been discovered as yet. Though each research study has its own specific purpose, in general, following are research objectives -

1. To gain familiarity with a phenomenon or to achieve new insight into it (studies with this objective in view are ~~the~~ termed as exploratory or formulative research studies)
2. To portray accurately the characteristics for a particular individual, situation or a group (studies with this object in view are known as descriptive research studies)

3)

To determine the frequency with which something occurs or with which it is associated with something else (studies with this objective in view are known as diagnostic research studies.)

4)

To test a hypothesis of a causal relationship b/w variables (such as are known as hypothesis testing research studies)

5)

To determine the frequency within which something occurs or with which it is associated with something else (studies with this objective in view are known as diagnostic research studies.)

6)

To portray accurately the characteristics for a particular individual, situation or a group.
