

Qn-3 Advantages of Process layout

- flexibility + it is more flexible when compared to a product layout

② Lower Investment-

③ No Stoppage of Production

④ Scope for Expansion

⑤ Full utilization of equipment

⑥ Better Supervision

⑦ Inefficient material handling

② High space requirements.

fixed position layout

Fixed position layout is one of the basic types commonly used in operations management. This layout is often associated with the assembly of large or fragile items that are too large or fragile to be effectively moved to a stationary location for completion. The transformed resources remain stationary while the transforming resources (staff, subpliers, and equipment, etc.) are brought to the site where the product will be assembled.
