

Q-5) mass Production :-
and batch Production are
more or less the
same. But one big
difference is that
production is limited to
several hundred of
products at a time, for
example.

A batch of
or biscuits, books,
magazines and like where
mass production is at a
time. This usually is
a large scale operation
that involves large
machinery and the
product passes through
several stages during
production.

Batch Production:-

Batch Production is the example of a company that consider a have a company for MEG. If other company Contract with u for only same quantity of jobs like u have to make only 100 screw then other 2000 batch for that company so its work you are just have a batch only and produce that works and give to it in batch production the variety of job are different and change every time.
