Distribution Logistics

Distribution logistics include the wide range of activities. These all focus on achieving an efficient distribution and movement of finished goods product. This takes goods from the end of a production line to reach consumers.

Aside it provides a wide set of optimization methodologies and tools. These are all used in three main areas that includes, warehouse management, order fulfillment and transportation management.

① Order fulfillment :- ① Process

throughout time.

- Transaction efficiency
- Transaction ~~and~~ reliability
- Timely and accurate and internal information communication

(11) Warehouse - that is well planned out will several benefits. It will optimize work force efficiency and increase the throughout time.

(12) Transportation Management -

Transportation management also focus on core carrier programs and handling out bond and internal transportation is prioritized.
