

Section 2

A1 * Free space management → The system keeps tracks of the free disk blocks for allocating space to files when they are created. Also, to reuse the space released from deleting the files, free space management becomes crucial.

* Symbolic file systems A symbolic link is file system feature that can be used to create a link to a specific file or folder. It is similar to windows shortcut & Mac alias but is not an actual file. Instead, a symbolic link is a entry in a file system that points to a directory or file.
