

Section-3

Ans-2

Software Maintenance:-

Software maintenance is the process of changing a system after it has been delivered to the customer. Maintenance is the last phase of SDLC.

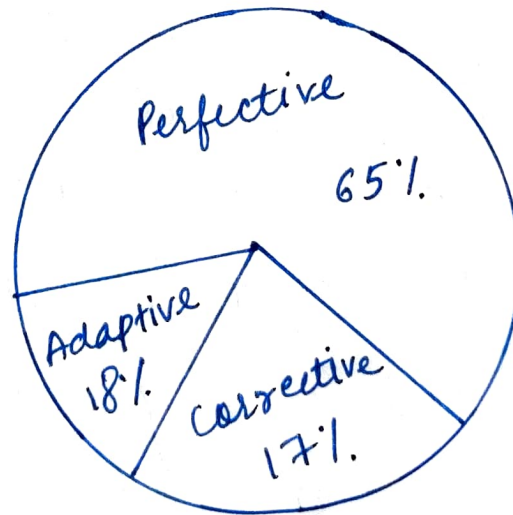

Fig: Software Maintenance

There is a need of software maintenance due to the following reasons:-

- changes in user requirement
- Program/ system Problem.
- changing h/w / slw environment.
- Improve system efficiency and throughput.
- modify the components.
- Test the resulting product to verify correctness of the changes.
