

Qec - A

Q.1 Define Disk scheduling?

Ans Disk scheduling \Rightarrow disk scheduling is done by o.s to schedule

Input/output request arriving for the disk scheduling is also known as I/O scheduling. Disk scheduling is important because two or more request may be far from each other. So can result in greater disk arm movement

Disk Delay	Queuing	Seek time	Rotational latency	Transfer time
------------	---------	-----------	--------------------	---------------

← Disk access time →

← Disk Response time →
