

Sec-4

① Pozzolans are a ~~be~~ broad class of siliceous or siliceous and aluminous materials which in themselves, possess little or no cementitious value but which when finely divided form in the presence of water, react chemically with calcium hydroxide at ordinary temperature to form compounds possessing cementitious properties.

Pozzolanic materials are siliceous and aluminous materials, possessing little or no cementitious value by themselves, but in finely divided form and in the presence of moisture react chemically with calcium hydroxide liberated on hydration of cement at ordinary temperature to form compounds, possessing cementitious properties.
