

Section - 8

Q2Ans

* Program to find the sum of all odd and even numbers upto a number specified by user

```
N = (int ("enter n"))  
first = 0,  
second = 1
```

```
def fibo (n):  
    if (n == 1):  
        return n-1  
    if (n == 0):  
        return 0  
    print (fibo (n-1) + (n-2))  
    return (fibo (n-1) + (n-2))
```

* Largest number until "done"

```
largest = 0  
while (true):  
    a = input ()  
    if (a, isdigit()):  
        if (a > largest):  
            largest = a  
            print (largest)
```

```
else:  
    if (a == "done"):  
        break
```
