

Section-1

- Ans 1) The aggregate of all the mutually interacting units, big or small, sentient or insentient together can be called nature.
- 2) These units are infinite in number and we could easily observe that there exists a dynamic balance, self regulation among all units.
- 3) This self regulation is harmony or balance in nature.

Natural harmony is necessary for the following reasons:

- 1) Natural harmony is necessary to solve the problem of global warming and depletion of ~~our~~ non-renewable natural resources can be avoided.
- 2) Natural harmony with trees cure all problems like - reduction of wind, velocity, energy saving, doing companion planting, reduction of building heat etc.
- 3) One can understand the depths of harmony and alignment in nature by contemplating and reflecting upon the natural order.
