

Section-4

Ans-2

- (a) (i) Number of bit strings of length eight that start with a 1 bit: $2^7 = 128$
 (ii) Number of bit strings of length eight that end with bits 00: $2^6 = 64$.
 (iii) Number of bit strings of length eight that start with a 1 bit and end with bits 00: $2^5 = 32$
 Hence, the number is $128 + 64 - 32 = 160$.

(b)

(i) One-to-one function: Let $f: X \rightarrow Y$ then f is called one-to-one function if for distinct elements of X there are distinct image in Y i.e., f is one-to-one iff

$$f(x_1) = f(x_2) \text{ implies } x_1 = x_2 \forall x_1, x_2 \in X$$

One-to-One

(ii) Onto function: Let $f: X \rightarrow Y$ then f is called onto function iff for every element $y \in Y$ there is an element $x \in X$ with $f(x) = y$ or f is onto if $\text{Range}(f) = Y$.

(ii) One-to-One onto function: A function which is both one-to-one and onto is called one-to-one onto function.

(C) To prove: $(p+q)' = p'q'$

To prove the theorem we will show that $(p+q) + p'q' = 1$

$$\begin{aligned}
 \text{Consider } (p+q) + p'q' &= \{(p+q) + p'\} \cdot \{(p+q) + q'\} && \text{by distributive law} \\
 &= \{(q+p) + p'\} \cdot \{(p+q) + q'\} && \text{by commutative law} \\
 &= \{q + (p+p')\} \cdot \{p + (q+q')\} && \text{by Associative law} \\
 &= (q+1) \cdot (p+1) && \text{by Complement law} \\
 &= 1 \cdot 1 && \text{by dominance law} \\
 &= 1 && \text{①}
 \end{aligned}$$

Also Consider

$$\begin{aligned}
 (p+q) \cdot p'q' &= p'q' \cdot (p+q) && \text{by Commutative law} \\
 &= p'q' \cdot p + p'q' \cdot q && \text{by Distributive law} \\
 &= p \cdot (p'q') + p' \cdot (q'q) && \text{by Commutative law}
 \end{aligned}$$

$$\begin{aligned}
 &= (p \cdot p') \cdot q' + p' \cdot (q \cdot q') \\
 &\quad \text{by Associative law} \\
 &= 0 \cdot q' + p' \cdot 0 \\
 &\quad \text{by complement law} \\
 &= q' \cdot 0 + p' \cdot 0 \\
 &\quad \text{by commutative law} \\
 &= 0 + 0 \quad \text{by dominance law} \\
 &= 0 \quad \text{--- (2)}
 \end{aligned}$$

From (1) & (2) we get,

$p'q'$ is complement of $(p+q)$ i.e.,
 $(p+q)' = p'q'$
