

Q2.  
Ans

Given:-  $I_L = 2A$ ,  $R_a = 0.2\Omega$ ,  $I_{fg} = 2.5A$ ,  $I_{fn} = 2A$   
 To find: Efficiency of motor,  $\eta_m$  and efficiency of generator,  $\eta_g$

1) Generator armature current.

$$\begin{aligned} I_{ga} &= I_g + I_{fg} \\ &= 60 + 2.5 \\ &= 62.5 A \end{aligned}$$

2) Input motor current

$$\begin{aligned} I_m &= I_i + I_g \\ &= 15 + 60 \\ &= 75 A \end{aligned}$$

3) Motor armature current.

$$\begin{aligned} I_{ma} &= 75 - 2 \\ &= 73 A \end{aligned}$$

4) Copper loss in motor armature.

$$\begin{aligned} I_{ma}^2 \times R_a &= ~~62.5~~ (73)^2 \times 0.2 \\ &= 1065.8 W \end{aligned}$$

5) Copper loss in generator armature.

$$\begin{aligned} I_{ga}^2 \times R_a &= (62.5)^2 \times 0.2 \\ &= 781.25 W \end{aligned}$$

$$6) \text{ Total armature copper loss of set} \\ = 1065.8 + 781.25 \\ = 1847.05$$

$$7) \text{ Total stray loss of set} = \text{Input} - \text{Total losses} \\ \text{in armature} \\ = 2500 - 1847.05 \\ = 652.95$$

$$8) \text{ Stray loss per machine} = \frac{652.95}{2} \\ = 326.47 \text{ W.}$$

Motor efficiency:-

$$1) \text{ Input Power} = VI_m = 250 \times 75 \\ = 18750 \text{ W}$$

$$2) \text{ Armature copper loss} = 1065.8 \text{ W}$$

$$3) \text{ Field copper loss} = 250 \times 2 \\ = 500 \text{ W}$$

$$4) \text{ Stray loss} = 326.47 \text{ W}$$

$$5) \text{ Total loss} = 1065.8 + 500 + 326.47 = 1892.27 \text{ W}$$

~~1892.27 W~~  
~~1928.8 W~~

$$6) \quad \eta_m = \frac{\text{Input} - \text{Losses}}{\text{Input}} \times 100 \\ = \frac{18750 - 1892.27}{18750} \times 100 =$$

$$= \frac{16857.73 \times 10}{1875}$$

$$= \frac{168577.3}{1875} = 89.90\%$$

Generator efficiency:-

1) Output Power =  $250 \times 62.5$   
 $= 15625$

2) Armature copper loss =  $781.25 \text{ W}$

3) Field copper loss =  $250 \times 2.5 = 625 \text{ W}$

4) Stray loss =  $326.47 \text{ W}$

5) Total loss =  $781.25 + 625 + 326.47$   
 $= 1732.72 \text{ W}$

6) Generator efficiency =  $\eta_g \frac{\text{Output}}{\text{O/P} + \text{Losses}} \times 100$   
 $= \frac{15625}{15625 + 1732.72} \times 100$   
 $= \frac{1562500}{17357.72}$   
 $= 90.01\%$
