

```
print(r)
```

```
[1, 4, 7]
```

```
[2, 5, 8]
```

```
>>>
```

Section of

②

len:- `len(s)` returns the length of an object. The argument provided may be a sequence (string, tuple, or list) or a mapping.

```
>>> s = "python"
```

```
>>> len(s)
```

```
>>> lst = [1, 2, 3]
```

```
>>> len(lst)
```

```
>>> d = {'a': '1', 'b': '2', 'c': '3', 'd': '4', 'e': '5'}
```

```
>>> len(d)
```

```
3
```

all()

```
>>> l1 = [1, 2, 3, 4, 5, 6]
```

```
>>> all(l1)
```

```
True  
>>> l1.append(1)
```

```
>>> all(l1)
```

```
False
```

```
>>> all([])
```

```
True
```

```
>>> t1 = ("tuple")
```

```
>>> all(t1)
```

```
>>> t2 = ("tuple", "")
```

```
>>> all(t2)
```

```
False
```

```
>>> s = {}
```

```
>>> all(s)
```

```
True
```

```
>>> any(1) >>> any(0) >>> any(False)
```

```
>>> any(l1)
```

```
False
```

```
>>> l1.append("string")
```

```
>>> any(l1)
```

```
True
```

```
>>> any(0)
```

```
False
```

```
>>> any(("", 0))
```

```
False
```

```
>>> any(("", 1))
```

```
True
```

```
>>> any({})
```

```
False
```

```
>>> any({0: "zero"})
```

```
False
```

```
>>> any({"zero": 0})
```

```
True
```

sorted()

```
>>> numbers = [3, 1, 6, 7, 1100, 10]
```

```
>>> sorted(numbers)
```

```
[1, 3, 6, 7, 10, 1100]
```

```
>>> t = ("beta", "beta", "alpha", "Alpha")
```

```
>>> sorted(t)
```

```
['Alpha', 'beta', 'alpha', 'beta']
```
