

Section - 7

Explain four order existing in nature?
How are they interlinked to one another?

Nature →

All the physical objects that are in solid, liquid or gas state either living or non living collectively termed as nature

In other words, the aggregate of all the mutually interacting units, big, small, sentient or insentient together can be called nature.

Date _____

We observe their exist a dynamic, balance, self-regulation among all these units.

There are four orders in nature

1- Material Order

2- Pranic Order

3- Animal Order

4- Human Order

1- Material Order: The big land mass of the continents, gigantic water bodies like ocean and seas, mountains and rivers, the atmosphere above, the heaps of metals and mineral below

The dense gases and fossil fuel deep below the surface of the earth, all fall into the material order. The material order is visible,

2 → Pranic Order → Our land mass is covered with grass and small shrubs and they form the lining on the entire soil.

Shrubs, plant and tree form huge forest along with the flora in the ocean. All of this is plant / bio order or it is the next big order.

The material order is far greater in quantity compared to the plant.

3 → Animal Order → Animal and birds form the third largest order and we call them the animal Order. Hence, we see that ~~that~~ the plant Order is far greater in quantity than the animal order.

4 → Human Order ↯

Human Orders are the smallest order and they are referred to as human Order. Animals are far greater in quantity as compared to the human Order.

10 They are interlinked to one
other ↯

In the nature all the units are connected to each other and fulfilling each other.

Human being is related to all human being.

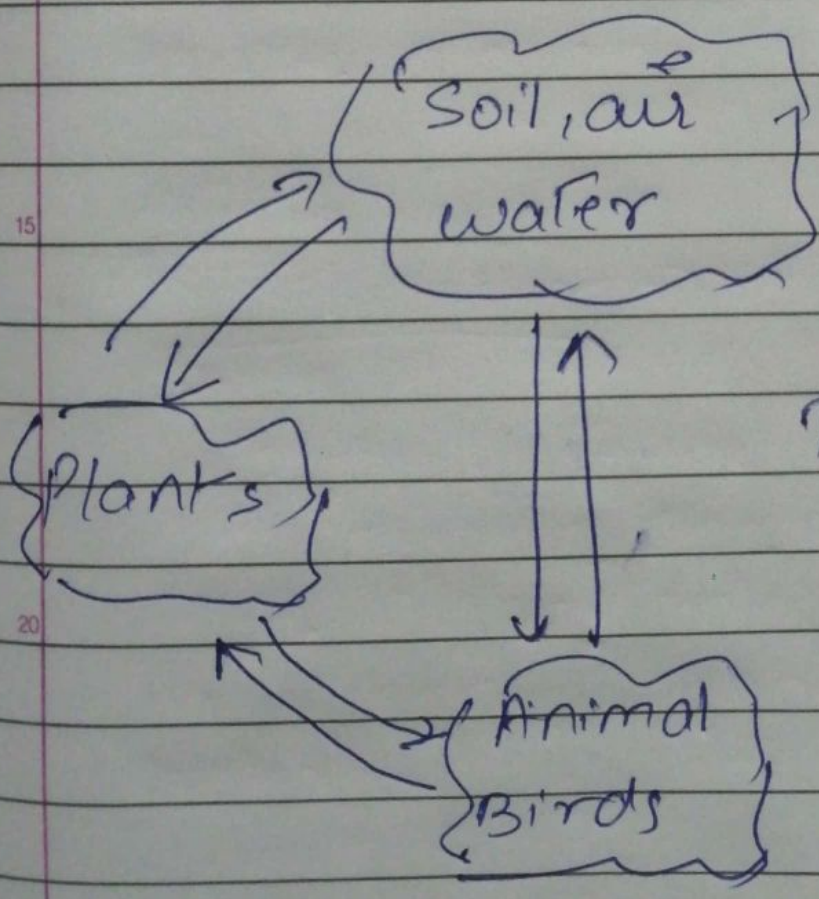

On the basis of feelings emotion for everyone.

17 Material Order and plant Order ↯

The material order provide the nutrient to the plant order in the form of Soil / mineral etc. while

the plant | order decay and form more nutrients thus enriching the soil. The plant order also decays to substance like oil and coal which are store deep within the earth as protection against the heat from the core inside the earth..

The root of the plant hold the soil together and prevent the soil from erosion.

We can easily see that they are interconnected

The relationship b/w these order is such way they will be fulfilled.

Material Order plant / Bio-Order and Animal Order

The material order provide the basic for movement of all animals birds and fishes.

Water, oxygen and other gases are necessities for both plant and animal.

At the end the animal order help enrich the soil with its excreate and these excreate helps the plant with nutrients.

Material Order plant / Bio-Order Animal Order =>

We humans also have a natural acceptance to be mutually fulfilling to these three order.

We are not able to ensure this mutual fulfillment.

We are dependent on the material order for soil and mineral and metals but only end up polluting.

We are dependd on the plant of our food and holding together the large ecosystems.
