

Section-4

Q.1) Explain the importance of Perception. Define the terms Perception Process.

Ans. Perception is a subjective, active and creative process through which we assign meaning to sensory information to understand ourselves and others. It can be defined as our recognition and interpretation of sensory information. It also includes how we respond to the information.

It is the process by which an organism detects and interprets information from the external world by means of the sensory receptors. It is our sensory experience of the world around us and involves both the recognition of environmental stimuli and actions in response to these stimuli.

*

Perception Process.

Perception Process of selecting organizing and interpreting information. This process which is shown in includes the perception of select stimuli that pass through or select perceptual filters are organized into our existing structures and patterns and are then interpreted based on previous is a largely cognitive and psychological process organize it and make meaning from what makes it through our perceptual filters and into our social realities.
