1:- TYPES OF SAMPLING:-

• There are five types of Sampling :-

1: RANDOM SAMPLING:- Putting Everyone's name in hat & drawing out several names. Each element has an equal chance of occur.

2: Systematic Sampling:- The list of element is counted off .i.e. Similar to lining everyone up 1,2,3,4 etc.

3: Convenience Sampling:- It's probably the worst technique to use. Readily available data is used, The first person surveyor runs into.

4: Cluster Sampling:- accomplished by dividing population into groups.

5: Satisfied Sampling :- divides the population into groups called strata.
