SECTION - 3

I:- Shearing and forming in manufacturing:-

Shearing and forming is what the process seeks to accomplish. Shearing is used to cut a piece of material into two pieces, whereas forming is used to change the shape of a piece of material generally without removing any material.

* JOINING IN MANUFACTURING:-

Joining of materials is an important technology in many manufacturing industries.

Most products, machines or structures are assembled and fastened from parts and the joining of these parts may be achieved through rivets, seaming, clamping, soldering etc.
