② Ans - A research problem is a statement about an area of concern, a condition to be improved or a difficulty to be eliminated or a troubling question that exists in scholarly literature, in theory, or in practice that points to a need for meaningful understanding and deliberate investigation. In some social science disciplines the research problem is typically posed in the form of a question. A researcher, however, does not state a problem, does not offer a way to solve something or present a value question.
