

2. Research problem:-

A situation for which we have no ready & successful response by instinct or by previous acquired habit, we must find out what to do", i.e. the solution can be found out only after an investigation.

* Step in formulation of a research problem.

- Step 1:- Identify a broad field or subject area of interest to you.
- Step 2:- Dissert the broad area into subareas.
- Step 3:- Select what is the most interest to you.
- Step 4:- Raise research question.
- Step 5:- Formulate objectives.
- Step 6:- Assess your objectives.
- Step 7:- Double-check.
