

Section-5

Ques. Discuss the factors affecting productivity. Define the term productivity measurement.

Ans.

factors affecting productivity are: -

- ① Man power.
- 2 Equipment and machines.
- 3 Input materials.
- 4 Time
- 5 Floor area and space.
- 6 Power of Energy.
- 7 Finance
8. Movement of man & material.

Measured productivity is the ratio of a measured total output to a measure of input used in the production of goods & services. Productivity growth is estimated by subtracting the growth in inputs from the growth in output - It is the residual.
