

## Section - 4

Q.1  
Ans

Probability sampling technique in which samples from a larger population are chosen using a method based on the theory of probability. For a participant to be considered as a probability sample, he/she must be selected using a random selection.

Non-Probability sampling is a technique in which the researcher selects samples based on the subjective judgement of the researcher rather than random selection. Non-probability selection for exploratory studies like pilot survey and etc is very useful in handy.
