

Insure 3:- Solar energy is radiant light and heat from the sun that is harnessed using the range of ever evolving technologies such as solar heating, photovoltaics, solar thermal energy, solar architecture, molten salt power plant and artificial photosynthesis. It is an essential source of renewable energy and its technologies are broadly characterized as either passive solar or active solar, depending on how capture or distribute solar energy.

Wind energy:- Wind energy is the use of wind to provide the mechanical power through wind turbines to turn electric generators and traditionally to do other work like milling or pumping. Wind power is a sustainable and renewable energy and has a much smaller impact on the environment compared to burning fossil fuels.
